A.LATEX

MR. PIYASAK BOONKOY

FRESH LATEX IS A WHITE LIQUID SIMILAR TO COCONUT MILK OR MILK. FRESH LATEX IS SLIGHTLY VISCOUS. HAS A UNIQUE FRAGRANCE IT IS NEUTRAL AND NEGATIVELY CHARGED, SO IT IS NECESSARY TO USE A POSITIVELY CHARGED SUBSTANCE TO BIND THE RUBBER. LATEX AFTER CUTTING IF IT IS LEFT FOR MORE THAN 4 HOURS, IT WILL START TO LOSE ITS CONDITION, NOTICE FROM THE LATEX WHILE IT IS STILL FRESH, IT WILL BE LIQUID AND CAN DISPERSE WELL IN WATER.

IF THE LATEX BEGINS TO DETERIORATE, IT WILL THICKEN.

IF THE LATEX BEGINS TO DETERIORATE, IT WILL THICKEN OR BECOME SLIGHTLY VISCOUS. THE DISPERSION IN WATER IS SLOWER THAN NORMAL. BUT IF THE LATEX BEGINS TO SPOIL, THE LATEX WILL BEGIN TO STICK TO SMALL GRANULES AND CAN BE CLEARLY SEEN IF ONLY 1 DROP OF LATEX IS ADDED TO THE WATER. CLEARLY IN THE WATER

OR OBSERVE WHEN THE LATEX DROPS INTO THE WATER AND THE LATEX SPREADS SLOWLY, INDICATING THAT

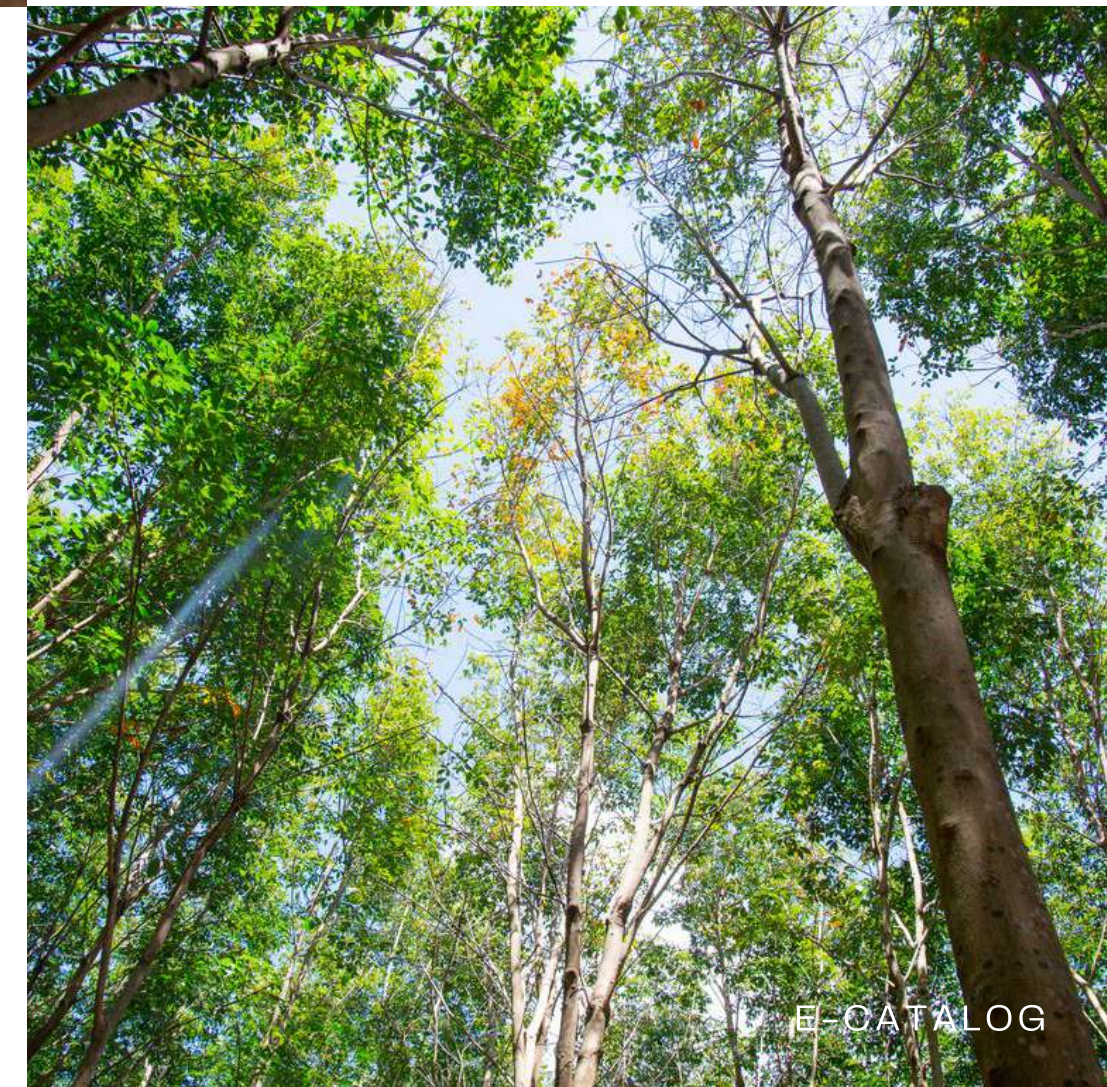

THE LATEX HAS BEGUN TO DETERIORATE. ON THE OTHER HAND, IF THE LATEX IS STILL FRESH WHEN DROPPED INTO WATER, IT DISPERSES QUICKLY AND HOMOGENEOUSLY.

IF LEFT TO SPOIL, THE LATEX WILL COAGULATE. A BAD SMELL OCCURS BECAUSE THE PROTEIN IN THE LATEX CONTAINS SULFUR AND REACTS WITH MICROORGANISMS TO PRODUCE ROTTEN EGG GAS AND MERCAPTAN ODOR. ESPECIALLY DURING THE SUMMER OR RAINY SEASON, IT WILL CATCH FASTER THAN USUAL. DETERIORATED LATEX IS NOT RECOMMENDED FOR PRODUCTION AS RAW RUBBER BECAUSE AIR BUBBLES WILL FORM IN THE RUBBER SHEET. BECAUSE AIR BUBBLES WILL FORM IN THE RUBBER SHEET AND IT IS NOT RECOMMENDED TO PRODUCE IT AS A CONCENTRATED LATEX BECAUSE IT WILL NOT BE ABLE TO CONTROL THE PRESERVATIVE VALUE OF THE LATEX. UNLESS IT IS USED TO MAKE RUBBER LUMPS OR ENTER THE PRODUCTION OF BLOCK RUBBER.

HOW TO TEST REAL PEARLS

1. OBSERVATION

REAL PEARLS ARE SLIME SOLIDS THAT ARE RELEASED IN LAYERS. THEREFORE, THE APPEARANCE WILL HAVE A LAYERED OVERLAPPING PATTERN AND SPARKLING GLITTER. UNLIKE ARTIFICIAL PEARLS, IF YOU LOOK FROM THE OUTSIDE, THERE WILL BE NO PATTERNS OR SPARKS OF ANY KIND.

2. RUB IT WITH YOUR TEETH.

THIS CAN BE DONE SIMPLY BY RUBBING THE PEARL WITH YOUR TEETH. IF IT IS A REAL PEARL, WHEN RUBBED AGAINST THE TEETH, IT WILL BECOME STIFF. NOT A SCRATCH AND THE SKIN LOOKS ROUGH. THE ARTIFICIAL PEARLS ARE SLIPPERY AND SCRATCHY WHEN RUBBING AGAINST THE TEETH AND THE SURFACE OF THE PEARLS WILL HAVE LOCAL ABRASIONS.

3. WEIGHING

REAL PEARLS, WHEN WEIGHED, TEND TO HAVE A GOOD WEIGHT. THE ARTIFICIAL PEARL WHEN TAKEN WEIGHED, IT WILL BE LIGHTER THAN STANDARD. WHICH CAN IMMEDIATELY RECOGNIZE THAT IT IS AN ARTIFICIAL PEARL, WHICH HAS BEEN SYNTHESIZED BY ITSELF

4. USING PITA

WHEN USING ARTIFICIAL PITA THE SURFACE OF THE PEARL WILL BURN AND MELT WITH FIRE BECAUSE ARTIFICIAL PEARL HAS NO HEAT RESISTANCE PROPERTIES. AS FOR THE REAL PEARL WHEN USING PITA, THERE WILL BE ONLY A SMALL AMOUNT OF SOOT. AND CAN BE USED TO WIPE OFF
